

DRYER LINT ADVISORY

The clothes dryer is equipped with both an internal lint filter and ceiling mounted secondary lint trap. The internal clothes dryer lint filter should be cleared after each use of the clothes dryer or as recommended by the clothes dryer manufacturer. The ceiling mounted lint trap should be inspected and cleared monthly or more often if necessary to keep it clear. These steps will increase the energy efficiency and safe operation of your clothes dryer as well as prevent irreparable harm and damage to the clothes dryer and clothes dryer exhaust system.
