

# Water Shutoff Valves

Turn Left to Loosen

Turn Right to Tighten

Shutoff Valves prevent flooding and water damage when fixtures or appliances overflow or leak.

## Main Water Shutoff

There is a main water shutoff valve typically located by your water heater. This will shut off all the water going into your home. It can look like one of the two pictures below.

## Water Shutoff Valves

Most water fixtures have their own shutoff valves. Please become familiar with all the shutoff valves in your home, their location and how to turn them off. Remember, if you have a leak and you cannot locate your fixtures shutoff valve; shut the water off at the main shutoff in the garage. Below are pictures of the various water shutoff valves in your home.
